

Roofline per die, projected (arch_eval). Filled = analog IMC, hollow = systolic. o prefill, □ one decode step, ★ whole wave. Compute roof = tiles + attention rail

ARCH: Llama-3-8B, 512/128, 100 mm², 1 HBM3 stack
analog notes_native vs systolic W8 (same weight and KV formats)

Sohu: Llama-3-70B FP8, 2048/128, B=1000, 1,063 mm², 4.8 TB/s (per die of 8)
analog notes_native vs systolic W8 (same weight and KV formats)
